

DuPont™ Tyvek® – a spunbonded material made from high-density polyethylene fibers – offers a portfolio of tough, durable sheet products that are stronger than paper and more cost-effective and versatile than fabrics.

Since Tyvek® was initially discovered in 1955, DuPont has been a recognized global leader in selective barrier technology. Lightweight and durable, water-resistant yet breathable, DuPont™ Tyvek® has introduced new dimensions of protection, security and safety in a wide variety of categories, including building envelopes, industrial protective apparel, and medical packaging. Today, Tyvek® is being used as a trendy material for lifestyle consumer product design. There are two different structures of Tyvek® used in graphics and consumer goods applications: paper-like hard structure and fabric-like soft structure.

DuPont has been collaborating with value chain partners to enhance the flexibility of Tyvek® for product design, and enable the infinite possibilities in color, shape and structure of the products. Global retail brands, such as Ikea and Starbucks, as well as various entrepreneurial businesses have launched products designed with Tyvek® that focus on environmental protection and lifestyle and sustainability. Durable

DuPont™ Tyvek® is a unique nonwoven material only from DuPont. Tyvek® is made of 100% high density polyethylene fibers randomly laid and compressed to form a remarkably tough printing substrate that is ideal for applications where durability & tear resistance is of prime importance. Tyvek® can resist repeated folding and flexing without tearing. It can also be glued, laminated, sewn, stapled and fixed.

Tyvek® combines the performance of paper, film and fabric and thus makes it ideal for a wide range of applications. Because of its unique physical properties, Tyvek® has already been successfully used for a wide variety of applications such as:

BREATHABLE

Allows water vapor to escape

WATER RESISTANT

Sheds rain, snow and spills

TEAR RESISTANT

Resists punctures, tears and abrasion

LIGHTWEIGHT

Comfortable and non-bulky

PAPER-LIKE

Looks like paper but is so much stronger

RECYCLABLE

Made of recyclable HDPE. Lower weight for less waste

Light-weight

Tyvek® is incredibly light and flexible. It boasts a remarkable strength-to-weight ratio, so coupled with the high strength and recyclability it is therefore an ideal printing substrate for banners and signs.

Tear-resistant

DuPont™ Tyvek® is made to perform in harsh, rugged and extreme conditions. Water, chemicals, heat, cold, rough handling, long-term outdoor use? No problem! Tyvek® is tear, puncture, water, UV and chemical resistant.

Water-resistant and chemical-resistant

When wet, paper absorbs humidity and falls apart. Tyvek® repels water, keeping your message perfectly intact. Tyvek® is not affected by most acids, bases and salts. It has excellent rot and mildew resistance and resists soiling and staining.

Tyvek® can endure temperatures ranging from -70°C to +118°C. However, some deformation may occur, at around 80°C. Also, note that Tyvek® is made from high density polyethylene, which can burn; thus Tyvek® should not be considered fire resistant.

Printable

Tyvek® is printable using traditional techniques:

offset , flexo , screen , UV inkjet , thermal transfer , gravure , latex , letterpress printing processes
Tyvek® can be used for most digital printing techniques. For more information refer to our technical handbook.

Easily Converted

DuPont™ Tyvek® is a unique and remarkably tough printing substrate incredibly easy to convert. Tyvek® can be easily:

Coated , Embossed , Folded (dead foldable) , Glued , Hot foil stamped , Laminated , Perforated & punched , Stitched , Welded and heat sealed , Recyclable

Made of high-density polyethylene fibres (HDPE), Tyvek® is 100% recyclable just like plastic bottles.

Withstands Outdoor Exposure

There's no need for protective coating on your tags, labels or whatever—as long as you print them on DuPont™ Tyvek® substrate. Tyvek® graphics and envelopes styles can be expected to withstand outdoor exposure from one to three months, depending upon weather conditions. Special UV coatings may extend the exposure length.

Corona Treated

The corona and antistat treatment on Tyvek® enhances the effectiveness of any ink, adhesive or other coating process and makes Tyvek® easy to use on flexographic, letterpress, offset, and some digital presses. Specifically, corona treatment on both sides of DuPont™ Tyvek® styles with a "D" suffix and style 1079 increases surface wettability, as measured by its improved surface tension (40-42 dynes/cm2).

FDA-approved for Food Contact and Sterile Applications

If you're printing tags or labels for food contact or sterile applications, we've got just what you need. Tyvek® styles 1443C and 1058C can be used for food contact applications.

OM Lamp

Adjustable Brightness Paper Lamp

We have designed a button on the wood bracket to adjust the brightness of the light. Just rotate it clockwise and the light will be turned on. You can adjust the brightness to an appropriate level according to the actual scenario.

Change the Shape As You Like

We have designed a fan-shaped shaft body, which makes the shape of OMLAMP can be varied, and the shape can be arbitrary, semi-sector or spherical or more. OMLAMP's workmanship is very delicate, and its wooden part is not only very durable, but also makes the light very stable.

Durable Folding Paper

DuPont Tyvek waterproof folding paper is used for manufacturing OMLamp. This paper is not only waterproof, but also tear-resistant and very durable. It can be easily maintained with no fading and no cracking in various climates. It provides an excellent performance in reflecting sunlight, and is also recyclable and environmentally friendly.

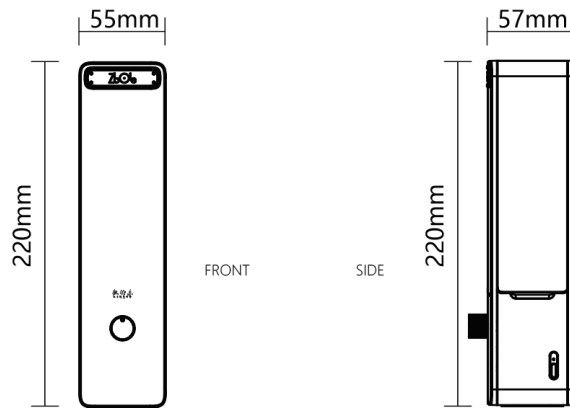

Suitable for Any Scenes

The OMLAMP has various shapes, which can be adjusted to match different scenes, such as bedrooms, working table, and dinning table. One OMLAMP can be fully utilized in many occasions

Brand we have worked with & Our advantages

Our advantages:

Delivery service : we are providing excellent delivery service , we have large stock for finished product and raw materials and multiple production lines

Latest product : We have 5 designer to create products according to customer needs, including customized logo/ printing/product appearance/function, etc., and we design and develop 1-2 new products according to market demand every quarter, to provide customers with a steady stream of hot style products

Patent advantage: ever our products has applied for patents and all kinds of certificates and test reports,Such as UN38.3,MSDS,BSCI,ROHS,FCC,CE.

Service advantage: We have a professional foreign trade team proficient in English and import and export knowledge, which will save communication time and help you solve all pre-sales and after-sales problems.

And we have a one-year warranty. If your product has any inhuman damage within one year, we will replace it for free.
